The Neck Bone's Connected to the...

This program draws on current research on form and function of the cervical spine. Dr. Brown applies chiropractic principles to the peer reviewed studies for a more accurate analysis and certainty in case management.

Dr. Brown's lectures have been well received and are designed to easily apply into a busy practice. He has had the opportunity to refine the program while achieving extension faculty status with Palmer College, University of Bridgeport, Texas College and Sherman College of Chiropractic.

X-Ray, Disc Injuries and Disc Degeneration, Range of Motion and Functional Testing will be included in this lecture, refreshing your skills and updating progress in imaging research.

Course Highlights

- Review cervical spine normal anatomy and function
- History and examination of common cervical spine complaints
- Treatment options for acute injuries, options for chronic injuries
- When and how to start restoration
- Re-examination and goal setting
- Management for headache, concussion and vertigo for use on Monday Morning!

"Postgraduate programs sponsored, co-sponsored or hosted by Sherman College of Chiropractic may not always reflect the view of the college or its employees."

About the Instructor

Dr. Rob Brown is a 1987 graduate of Palmer College of Chiropractic. In 1993 he completed his CCSP program and increased his participation with athletes and sports injuries. His family practice experienced many patients having injuries which have a sports injury similarity. Dr. Brown became certified to instruct CE credits to share his knowledge and to effectively offer the best treatment and rehabilitation to reach normal function more quickly. Combining chiropractic with sports stabilization gives each patient the best chance to function to their innate potential.
